

With the development of Cutting Edge Technology Solutions, we enable our clients to attract new customers, understand their in-store behavior, increasing their loyalty by enhancing their shopping experience in a safety environment.

Interax Random Inspection

INTERNAL THEFT IS THE NUMBER ONE SOURCE OF SHRINKAGE, for the retail industry, resulting in billions of dollars in losses each year world wide. In today's competitive retail environment, with its razor thin margins, these losses strikes directly on the bottom line making it top priority to for retailers to minimize.

BASED ON CUTTING EDGE COGNITIVE VISION AND ANALYTICS SOFTWARE, INTERAX RANDOM INSPECTION SOLUTION OFFERS cost efficient, scalable, and easy-to-install tool for staff inspection. It is a powerful stand-alone staff inspection application embedded directly in IP cameras, letting users leverage existing IP networks. The product automatically and randomly selects staff for inspection when leaving the premises.

Interax Random Inspection

BENEFITS OF RANDOM INSPECTION SENSING

Let Interax Random Inspection Solution be a central tool for improving your business.

- Reduce shrinkage.
- Reduce fraud.
- Provide for a safe workplace.
- Random selection of staff secures a high level of staff integrity.

REPORTING

Interax Random Inspection Solution lets you view important statistics like:

- Number of people entering and leaving,
- When people entering are and leaving,
- Number of people chosen for inspection.

Data is updated in real time by logging into the camera via your web browser. It does not require any additional software. With the additional software package Interaxlink Web Report you get a powerful statistics tool that works seamlessly with Interaxlink Random Inspection Solution. It helps you analyze people counting data, manage multi-site staff inspection and export data to compare with

- POS data,
- Daily weather conditions
- Marketing statistics etc.

The unit detects in real time when someone is leaving and randomly selects staff for inspection.

SYSTEM OVERVIEW

Interax Random Inspection Solution is an automated stand-alone, two way staff inspection system for ceiling mounted cameras. The unit detects in real time when someone is leaving and by random choice decides if the person should be scheduled for inspection or not. The detection event can be used to send video clips, SMS, play sound files, etc. Furthermore, accessing the camera over IP is very cost efficient for maintenance.

Interax Random Inspection Solution runs directly on standard IP camera, and data can be retrieved for analysis on timed intervals. The software is modular and fully autonomous with all processing done on the camera's CPU, requiring no dedicated PC. Manage, analyze and view data from any number of units and from multiple sites, using Interax Web Report.

FEATURES

- Automated system, operated in real time, fully embedded into ip cameras.
- Privacy secure.
- Access privileges.
- Digital zoom.
- Wide entrance can be covered by several synchronized units in a master/slave setup.
- Maintain your Random Inspection remotely over IP, set and monitor parameters, download or stream video.
- Seamless integration with Interax Web Report.
- Two way counting: counts people moving in two directions simultaneously.
- Accurate counting even under high density conditions or with baby carriages or trolleys present.
- Leading digital image processing minimizes shadow and reflection problems.
- Open protocol lets you integrate with data from pos and other systems.

SPECIFICATIONS

- Fully embedded.
- Minimum height over floor: 2.5 meters
- Maximum entrance width with one unit: 8.0 meters.

- An IP Camera equipped with Interax Tailgating offers an unmatched stand alone solution.
- Not requiring a PC for People Counting.
- The unit detects in real time and randomly selects staff for inspection
